SUMMARY

Backend Developer with 3+ years of experience building scalable server-based and serverless applications. Skilled in **Node.js**, **NestJS**, and **Express.js**, specializing in API design, microservices architecture, and cloud-native deployments on **AWS**. Experienced in database optimization, debugging, and delivering high-performance backend solutions.

WORK EXPERIENCE

MindInventory – Associate Software Engineer Oct 2024 – Present

- Develop and maintain scalable backend systems using Node.js, NestJS, and Express.js.
- Integrate AWS services (Lambda, S3, API Gateway, RDS) for cloud-native deployments.

AIPXperts Technolabs – Software Engineer Dec 2023 – Oct 2024

- Designed and implemented backend solutions using **NestJS** and **GraphQL**.
- Deployed and managed applications on AWS ensuring scalability, reliability, and high availability.

iQud Tek LLP – Software Engineer Apr 2022 – Oct 2023

- Built automated web scraping platforms using Puppeteer for data extraction and processing.
- Executed test cases to ensure accuracy, reliability, and performance of scraping workflows.

SKILLS

Backend Technologies:	Node.js, Express.js, NestJS, RESTful APIs, GraphQL
Programming Languages:	JavaScript, TypeScript, SQL
Databases:	PostgreSQL, MySQL, MongoDB
Cloud & DevOps:	AWS (Lambda, S3, API Gateway, EC2, ECS, Beanstalk, Amplify, RDS, SQS), Serverless Framework, Docker
Frontend Technologies:	React.js (Beginner), Angular (Beginner), HTML, CSS
Development Utilities:	VS Code, Cursor, Git, Bitbucket, Adminer, MySQL Workbench
Testing & Tools:	Postman, Jest, Swagger
Project Management:	Jira, Asana, CollabCRM

EDUCATION

Year	Degree/Certificate	Institute/School	CGPA/%
Aug 2018-May 2022	BE, Computer Engineering	GEC, Gandhinagar	8.01/10
March 2018	GHSEB (XII)	MRS Highschool, Unjha	70.00%
March 2016	GSEB (X)	Navjivan High School, Unjha	79.84%

PROJECTS

CollabCRM

- Architected a scalable CRM platform supporting employee, project, sales, and recruitment operations using Node.js and serverless architecture. This solution optimized resource allocation and streamlined workflows.
- Designed Kanban-style project tracking and integrated real-time notifications to enhance workflow transparency and productivity. These features improved team collaboration significantly.
- Orchestrated AWS services (Lambda, S3, API Gateway, RDS) to deliver secure, event-driven, and cloud-native functionality. This ensured robust performance under varying loads and enhanced system resilience.
- Tech Stack:** Node.js, ReactJS, PostgreSQL, Sequelize, DynamoDB, AWS API Gateway WebSocket, Serverless Framework, Microservices, AWS.

The Modern Schoolhouse

- Developed a comprehensive school management system enabling efficient parent-teacher interaction and digital class-room access. The system transformed communication channels effectively.
- Constructed modular modules for lessons, announcements, and user management, and integrated real-time chat using Socket.IO and WebSockets. This added a dynamic layer to user engagement.
- Deployed a high-performance NestJS backend on AWS with scalable, modular architecture ensuring consistent uptime and reliability. The setup handled peak usage seamlessly and improved overall efficiency.
- Tech Stack:** NestJS, ReactJS, PostgreSQL, Sequelize, Socket.IO, Redis, AWS.
